

JetPatch

PATCH MANAGEMENT AS A SERVICE
INTELLIGENT AUTOMATION PLATFORM

JetPatch is an intelligent vulnerability remediation cloud platform that minimizes cyber risk and designed for modern computing. It allows service providers to offer patch remediation services that are based on advanced technologies and a robust end-to-end process automation.

THE REMEDIATION CHALLENGE

- New software vulnerabilities are exposed at an alarming rate, compelling vendors to release multiple patches, overwhelming IT and Security teams. 60% of security breaches result from vulnerabilities that have a known fix. Many affected organizations already had a remediation solution in place when the breach occurred. It appears that maintaining endpoint security up to date is a complex task that keeps organizations exposed.

PATCH REMEDIATION OPPORTUNITY

- Service providers are constantly looking for new and innovative offerings to increase customers' share of wallet. As many small- and medium-size organizations struggle to keep up with their cyber hygiene, patch remediation remains top-of-mind for its security and IT staff. The complexity of the process and the risk it poses if not handled promptly, fuel its massive adoption potential.

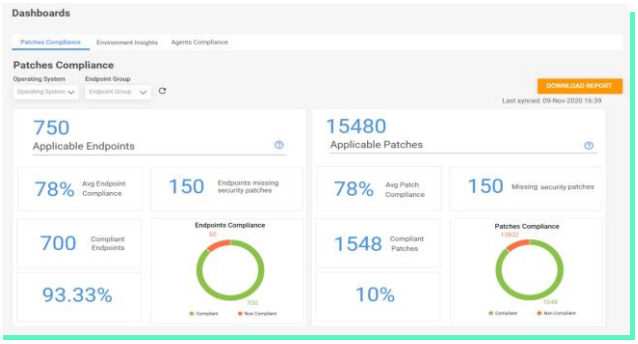

THE JETPATCH SOLUTION

- JetPatch takes an innovative approach to Patch Management as a Service (PMaaS), leveraging security tools that already exist in the organization, as well as best practices, to optimize endpoint remediation process and achieve continuous compliance.
- JetPatch equips service providers with the tools, data and process automation to maintain cyber hygiene across a wide customer-base and patch a variety of IT environments in a controlled and efficient manner.

JETPATCH ADDED VALUE

Value to Customer	Value to Provider
Downtime Reduction	Compliance Dashboard
Continuous Compliance	Process Optimization
Risk Prioritization	Remediation Prediction
Peace of Mind	Premium Service & Differentiation

JETPATCH COMPLIANCE DASHBOARD

KEY PRODUCT FEATURES

Compliance Dashboard

Views and analyzes the vulnerability remediation process of the entire customer base

Hybrid Environments

Supports customer diverse and complex IT environments ensuring complete install-base coverage

Continuous Compliance

Ensures that all customer environments are automatically updated with latest industry software updates

Customized Automation

Supports patch remediation automation per the specific need of every customer and per the agreed-upon SLA

On-Device Agent

Leverages agent management capability to deploy a light agent across the entire install-base to ensure real-time control and reporting

Machine Learning Insights

Analyzes and learns the root causes of remediation process delays and implications, predicts patch success rate and provide preemptive steps

PREDICTIVE PATCHING INNOVATION

JetPatch is taking vulnerability remediation operations *beyond* intelligent automation by simulating the future success of a patch cycle before it is executed. Using a multi-layer machine learning model, built on top of a data lake, the platform generates a variety of actionable insights, helping service providers fix root causes of remediation process delays ahead of time and optimize SLAs.

JetPatch

JetPatch automates vulnerability remediation to help enterprises proactively eliminate security flaws and achieve continuous compliance across endpoints and environments. Learn more at www.jetpatch.com. © JetPatch, 2020. All rights reserved.
