JetPatch

INTELLIGENT PATCH REMEDIATION PLATFORM

Continuous Discovery, Monitoring and Remediation

SIMPLE automated patch, software distribution, and server lifecycle management. **REPEATABLE** across physical, virtual, and cloud servers. **RELIABLE** centralized management with real-time reporting.

THE REMEDIATION CHALLENGE

- New software vulnerabilities are exposed at an alarming rate, compelling vendors to release multiple patches, overwhelming IT and Security teams. 60% of security breaches result from vulnerabilities that have a known fix. Most organizations affected already had a patching solution in place when the breach occurred. So, what went wrong?

- Vulnerability remediation is a collection of manual labor-intensive tasks, that are handled by teams with different agendas and toolsets, with minimal automation and little process governance. As a result, vulnerabilities remain unaddressed for long periods of time, putting the organization at great risk.

THE JETPATCH ADDED VALUE

Value to Customers

Faster time to remediation

Security & Compliance

Cost Savings

Process Automation & Governance

Value to Channels

SLA Improvements

Process Optimization

Innovation

High Growth Margin

THE JETPATCH SOLUTION

- JetPatch takes an innovative ecosystem approach, leveraging security tools that already exist in the organization. It applies machine learning insights, industry best practices and customer data to optimize the remediation process and achieve continuous compliance.

- JetPatch was designed from the ground up as an automated end-to-end, cross platform solution that accelerates time to remediation. It enables business leaders to track and enforce a single cohesive remediation process across the entire organization.

All Operating Systems Summary

95% Effective compliance ⑦		**82%** Total compliance ⑦		**245** Remediation plans ⑦
Applicable endpoints	266	Applicable endpoints	307	
Compliant endpoints	252	Compliant endpoints	252	
In progress endpoints	0	In progress endpoints	0	
Pending endpoints	0	Pending endpoints	0	
Failed endpoints	14	Failed endpoints	14	
		Exempted endpoints	41	

● New   ● Pending   ● In Progress   ● Completed

JetPatch

KEY PRODUCT FEATURES

|			
Configure Endpoints Automatically across the Environment	Enable Anomaly Detection and Diagnostics	Prevent Unauthorized Patches	Automatically Deploy Patches
Suspend Endpoint Patching	Enable Zero-Day Remediation	Enable Rollback of Patches	Enable Continuous System Checks

PREDICTIVE PATCHING INNOVATION

JetPatch is taking vulnerability remediation operations *beyond* intelligent automation by simulating the future success of a cycle before it is executed. Using a multi-layer machine learning model, built on top of a data lake, the platform generates a variety of actionable insights, helping IT and security teams fix root causes of remediation process delays ahead of time, and maximize endpoints compliance.

Predictive Patching

Let us analyze your environment and predict its patching success rates

Calculate applicable endpoints → Retrieve dependencies → Analyze patches catalog → Scan endpoints statuses → Predict patching success rates

RUN PATCHING SIMULATION

Supported Across 20+ Platforms

Windows · SUSE · Red Hat · ubuntu® Supported by Canonical · aws · ORACLE Linux · CentOS · AIX · ORACLE Solaris

Powerful Integrations

servicenow · SYMPHONY SUMMITAI · Jira · Nessus · Qualys · tenable · RAPID7 nexpose
